Tile laying tips

butech[®]
PORCELANOSA Grupo

A cement-based adhesive for laying absorbent ceramic tiles in indoor environments. Thixotropic.

cerancol

cerancol is a simple, effective solution for laying absorbent ceramic tiles on indoor cement-rendered walls and floors. With cerancol, tiles can be laid on a medium-bed layder of adhesive of up to 12 mm on uneven substrates. Also suitable for tiles laid directland on brick partition walls.

The composition and characteristics of this adhesive are designed to satisfand the needs of tile layders. cerancol is made of graded aggregates,

materials

Small and medium-format tiles.
Absorbent ceramic tiles:
Extruded tiles (Groups AIII and AII).
Porous single-fired and double-fired tiles (Group BIII).
Absorbent stoneware tiles (Group BIIa, BIb).

applications

substrates:
Cement-lime mortars.
Cement mortars:
- Cement render.
- Cement floor screeds. .

Do not use on plaster, wood, PVC, rubber or metal surfaces or those substrates subject to strong movements. In such cases, use politech.

uses

Interior and exterior floors.
Residential use.

highland resistant cements and specific additives. Designed to ensure optimal workabilitand, it has good working times, with no sagging.

coverage

tile	notched trowel (mm)	consumption
Up to 10x10 cm	U4	1-2 kg/m²
Up to 20x20 cm	U6	2-3 kg/m²
Up to 30x30 cm	U8	3-4 kg/m²
Up to 40x40 cm	U10 (Floating and buttering method)	4-5 kg/m²

A cement-based adhesive for laying absorbent ceramic tiles in indoor environments using the thin-bed method. Thixotropic.

tixocem

tixocem is a simple, effective solution for laying absorbent ceramic tiles on cement-based substrates. With tixocem, absorbent tiles can be laid on walls and floors both indoors and out. Resistant to frost and ice.

materials

Small and medium-format tiles.
Ceramic tiles > 3 % absorption rate:
- Extruded tiles de absorción (Groups AIII and AII).
- Porous single-fired and double-fired tiles (Group BIII).
- Absorbent stoneware tiles (Group BIIa).

applications

substrates:
Cement-lime mortars.
Cement mortars:
- Cement render.
- Cement floor screeds.

Do not use on wood, PVC, rubber or metal surfaces or those substrates subject to strong movements. In such cases, use politech.

uses

Interior and exterior floors.
Interior walls.
Residential use.

Tixocem is made of graded aggregates, highly resistant cements and organic additives. Designed to ensure optimal workability, with extended working times, thixotropic properties and no sagging.

tixocem plus

tixocem plus is an efficient, simple solution for laying tiles on cement, plasterboard or brick substrates. Suitable for laying indoor and outdoor floor tiles and indoor wall tiles.

Waterproof and resistant to ice and frost.

materials

- Absorbent and non-absorbent ceramic tiles:
- Extruded tiles (Groups AIII, AII and AI).
 - Single-fired and double-fired porous tiles (Group BIII).
 - Vitrified tiles (Groups BIa and BIb).
 - Porcelain tiles (Group BIa). Indoors only.

applications

substrates:

Cement/lime mortars.

Cement mortars:

- Cement renders.
- Cement- screeds.

Plasterboard

Brick.

Plaster*

* Prime first with uniprim

In this case, treat the substrate first with uniprim primer. Do not use on wood, PVC, rubber or metal surfaces or those substrates subject to strong movements. In such cases, usepolitech.

uses

Indoor and outdoor floors.

Indoor walls.

Residential use

Formulated with graded aggregates, high-resistance cements and organic additives, tixocem plus ensures optimal workability, extended working times and no sagging.

fr-one n

cement-based adhesives

A cement-based adhesive with excellent technical properties. Suitable for all ceramic tile formats and types. Its flexibility and bonding strength make it ideal for porcelain tiles and cases where a high-performance bonding material is required.

fr-one n

For commercial and industrial flooring, plasterboard substrates, floors with built-in underfloor heating etc.

materials

- Small and medium-format tiles.
Absorbent and non-absorbent ceramic tiles:
- Extruded tiles (Groups AIII, AII and AI).
 - Porous single-fired and double-fired tiles (Group BIII).
 - Stoneware tiles (Groups BIIa and BIb).
 - Porcelain tiles (Group BIa).
- Glass mosaics.
Natural stone and marble not prone to staining.

applications

substrates:
Cement-lime mortar.
Cement mortars:

- Cement render.
- Cement floor screeds.

Concrete.
Plasterboard.
Existing ceramic tiles.
Plaster or anhydrite substrates.*

*In this case, treat the substrate first with uniprim primer..

** Replace all the water in the mix with unilax additive.

Do not use on wood, PVC, rubber or metal surfaces or those substrates subject to strong movements. In such cases, use politech.

fr-one has a special grain size so that it can be used as a medium-bed adhesive, evening out minor irregularities in the substrate. For final application thicknesses of up to 10 mm.

fr-one is specially recommended for use on façades and brick substrates.

coverage

cement-based adhesives

unilax

A synthetic resin-based aqueous dispersion for improving cement-based adhesives. unilax is a special additive that can be added to cement-based adhesives to enhance their bonding strength and flexibility.

unilax

unilax greatly improves the adhesive's overall flexibility, allowing it to absorb contractions or expansions produced by temperature changes or moisture in demanding conditions. When laying large-format tiles and natural stone on exterior façades, it is highly recommendable to use unilax with one-flex, fr-one and super-one.

materials

All format tiles.
Absorbent and non-absorbent ceramic tiles:
- Extruded tiles (Groups AIII, AII and AI).
- Porous single-fired and double-fired tiles (Group BIII).
- Stoneware tiles (Groups BIIa and BIb).
- Porcelain tiles (Group BIa).
Natural stone and marble not prone to staining.

aditive cement-based adhesives

fonolax is an additive of synthetic resins in aqueous dispersion. It replaces the water in the mix. Ideally suited for mixing with one-flex, super-one or fr-flex cement-based adhesives in those cases when increased flexibility and bonding strength are required.

fonolax

With its high degree of flexibility, fonolax is an ideal additive to be mixed with cement-based adhesives in order to absorb the contractions/expansions caused by interior ambient temperature changes.

For rehabilitation projects involving acoustic insulation, it is especially recommended for adding to super-one adhesive. Ideal for adding to one-flex or fr-flex additives in the installation of ceramic tiles on floors with underfloor electric heating.

5 l. / 20 l.

*In this case, treat the substrate first with uniprim primer.

coverage

Replaces any water in the mix indicated on the container.

presentation

code	product	packaging (kg)	palet (kg)	price
B52502001	fonolax 20	20	560	2,18€
B52602001	fonolax 5	4x5	480	1,71€

uses

Soundproof sheeting: fonomix 15/40.
Floors with built-in underfloor heating.
Large tile formats on plasterboard substrates..

A fast-setting liquid adhesive made of calcium sulphate for laying ceramic tiles on anhydrite substrates. Suitable for large formats and interior floors.

super-an

super-an is recommended for laying ceramic tiles or similar coverings on anhydrite substrates that have not been previously treated with a primer. Thanks to its fluidity, large format tiles (up to 3600 cm2) can be laid without having to resort to the floating and buttering method. Suitable for use as a leveller for thicknesses up to 10 mm.

materials

All format tiles.
Absorbent and non-absorbent ceramic tiles:
- Extruded tiles (Groups AIII, AII and AI).
- Porous single-fired and double-fired tiles (Group BIII).
- Stoneware tiles (Groups BIIa and BIb).
- Porcelain tiles (Group BIa).
Natural stone and marble not prone to staining.

applications

substrates:
Anhydrite screeds.

Do not use on vertical, metal, plastic or wood surfaces or those substrates subject to strong movements. In such cases, use politex.

uses

Interior floors
Floors with built-in underfloor heating (agua).
Commercial flooring

bt-1000 n

dispersion adhesives

A flexible ready-to-use adhesive paste. Suitable for laying all types of ceramic tiles on interior walls. Thixotropic.

bt-1000 n

bt-1000 is suitable for laying small and medium-format ceramic tiles of all kinds on common building substrates. Highly recommended for plaster substrates and wooden panels. With bt-1000, the spot bonding method can be used to lay styrofoam, cellular polyurethane and/or rock wool insulation panels.

materials

- Small and medium-format tiles.
- Absorbent and non-absorbent ceramic tiles:
- Porous single-fired and double-fired tiles (Group BIII).
- Stoneware tiles (Group BIIa).
- Porcelain tiles (Group BIa).
- Insulation panels:
- Styrofoam panels.
- Polyurethane panels.
- Rock wool panels.

applications

- substrates:
- Plaster.
- Plasterboard.
- Wooden panels.
- Fibre cement.
- Cement render.
- Cement-lime mortars.
- Cellular concrete.
- Do not use on floors or for marble or natural stone Do not use on PVC, rubber or metal surfaces or those substrates subject to strong movements.
- In such cases, use politech.
- Do not lay non-absorbent ceramic tiles on non-absorbent substrates.
- No colocar cerámica de baja pgoldsidad sobre SUBSTRATES sin absorción.

bt-1000 contains a high amount of organic copolymers, finely granulated mineral aggregates, specific additives and water, ensuring an outstanding bonding strength and workability.

politech

politech can be used to lay all kinds of ceramic tiles and natural stone in situations when they are exposed to extreme conditions. Given its outstanding technical characteristics, it can be used on wood, metal, PVC and rubber. Waterproof and frost resistant.

materials

- All format tiles.
- Absorbent and non-absorbent ceramic tiles:
- Porous single-fired and double-fired tiles (Group BIII).
- Stoneware tiles (Groups BIIa and BIb).
- Porcelain tiles (Group BIa).
- Glass mosaics.
- Terracotta.
- Marble and natural stone.
- Conglomerate marble.

applications

- substrates:
- Common cement substrates.
- Prefabricated concrete.
- Concrete cast on-site.
- Plaster and anhydrite.
- Plasterboard.
- Existing ceramic tiles.
- Polyster.
- Metal.
- PVC.
- Wooden floors and walls.
- Rubber.

colorstuk 0-4

colorstuk 0-4 is the ideal high-tech mortar for grouting joints up to 4 mm, whatever the type of ceramic tile, both indoors and out. It is easy to use, resistant and colour fast, guaranteeing an ultra-fine finish with rectified materials and layouts with minimum width joints. Resistant to damp, frost and ultraviolet rays.

materials

- Absorbent and non-absorbent ceramic tiles:
- Extruded tiles (Groups AIII, AII and AI).
- Porous single-fired and double-fired tiles (Group BIII).
- Stoneware tiles (Groups BIIa and BIb).
- Porcelain tiles (Group BIa).
- Glass mosaics.
- Antiqued marble.
- Natural stone.

When used in situations with permanent damp or subject to strong deformation, replace the water in the mix with cl-stuk. For tiles with surface absorption, apply a protective treatment beforehand.

uses

- Interior and exterior floors and exteriors.
- Residential use.
- Public venues.
- Heavy-traffic floors.
- Swimming pools.

colorstuk 0-4 is made of aggregates, highly resistant cements, pigments and specific additives. It stands out for its workability and the ease with which it can be cleaned. Sold in a top-quality, attractive packaging material, it is a pioneer in meeting current market needs.

colorstuk rapid n

high-tech cement-based mortars

A high-tech coloured mortar with fast setting and hardening times for grouting joints from 2 to 15 mm. Suitable for all types of ceramic tiles and for natural stone. colorstuk rapid n is a simple, effective solution for grouting tile joints from 2 to 15 mm. It is easy to use, resistant and colour fast.

colorstuk rapid n

Its rapid setting time prevents the appearance of efflorescence and variations in shade, ensuring joints with a homogeneous, even finish. Its high waterproof protection and resistance to mould makes it ideal for use outdoors or in environments subject to constant damp.

colorstuk rapid n is made of specific hydraulic binding materials, graded aggregates and special additives, guaranteeing fast full cure times, excellent mechanical resistance and low water absorption, providing long lasting grouting in all situations.

colorstuk especial n

high-tech cement-based mortars

colorstuk especial is the ideal high-performance mortar for grouting tile joints of up to 8 mm on any kind of tiled surface, whether indoors or out.

colorstuk especial

Resistant and easy to use, it ensures colourfast tile joints, guaranteeing a perfect finish when used with rectified tiles or minimum joint widths. Resistant to damp, frost and ice and ultra-violet rays.

colorstuk especial is made of aggregates with a controlled grain size distribution, highly resistant cements, pigments and special additives. Thanks to its finely ground grain size, it easily penetrates tile joints of a minimum width.

cl-stuk

aditivo para material de rejuntado

A latex additive that can be mixed with the colorstuk range of high-tech grout mortars in cases when increased mechanical resistance, reduced water absorption or improved flexibility is required.

cl-stuk

cl-stuk is a synthetic resin additive in an aqueous dispersion that fully replaces any water in the mix, upgrading the mortar's mechanical properties, ensuring a high degree of flexibility and reduced water absorption.

It is mainly intended for areas that require more resistant tile joints, such as floors exposed to heavy traffic, ceramic tiles that are power-cleaned or surfaces in permanent contact with water. It increases the flexibility of the joint, making it ideal for deformable substrates such as wooden panels. Specially recommended for rectified tiles with minimal joint widths.

level1 n

self-levelling mortar

A fast-setting self-levelling mortar suitable for levelling and evening indoor floor substrates of all kinds. For thicknesses of between 2 and 10mm.

level1 n

level 1 is formulated with special cements, selected aggregates and specific additives that ensure good workability, fast-setting times, and a high mechanical performance.

Absolutely even, level surfaces can be achieved so that tiles can then be laid swiftly and faultlessly using cement-based adhesives .

23 kg.

applications

- substrates:
- New or already existing mortar floor screeds.
 - Floor screeds made with fast-cem.
 - Concrete floor screeds or slabs.
 - Anhydrite floor screeds.
 - Interior floors.
 - Floors with built-in underfloor heating.
 - Commercial flooring.
 - Insutrial flooring.
 - Raised flooring.

coverage

Consumption (kg/m2) 1,4 *
* per millimetre of thickness.

presentation

code	product	packaging (kg)	palet (kg)	price
B15901002	level 1 n	23	920	0,97€

instructions for use

Mix with a power mixer in the stated ratio. Pour the product over the surface to be levelled and spread it out using a levelling trowel.

uniprim

substrate preparation products

A water-base primer made of synthetic resins for the insulation of plaster, anhydrite and moulding plaster substrates. It reduces water absorption and improves the consistency of cement-based substrates. Specially recommended as a primer before pouring on self-levelling mortars.

uniprim

With uniprim, C2-type cement-based adhesives can be used to lay ceramic tiles quickly and efficiently on plaster, anhydrite and moulding plaster substrates. These substrates are incompatible with cement and need to be primed before coverings can be laid with these types of adhesives. uniprim reduces the level of absorption of highly absorbent substrates, preventing cement-based adhesives from drying out too quickly and thus ensuring that they set properly.

Developed by butech's laboratories using top-quality raw materials. Solvent-free.

20 l.

applications

- substrates:
- Plaster and anhydrite.
 - Moulding plaster.
 - Prefabricated plaster panels.
 - Concrete.
 - Cement mortar.
 - Cement-lime mortar.
 - Brick, ceramic and concrete blocks.
 - Before applying self-levellers.

coverage

Consumption (gr/m2) 100 - 200 *
* depending on the substrate's level of absorption.

presentation

code	product	packaging (kg)	palet (kg)	price
B52501001	uniprim 4x5	4 x 5	480	4,31€
B52601001	uniprim 20	20	560	3,84€

instructions for use

Apply with a wide brush or roller over the entire surface to be treated. Thanks to the product's special colour, tile layers can easily identify those areas that have already been filled, thus speeding up the process.

A synthetic resin in an aqueous dispersion that enhances the overall mechanical performance and workability of cement-based mortars.

unicem

When used for cement rendering, floor screeds and other applications in outdoor environments, it guarantees increased waterproof protection, reduced deformability and resistance to atmospheric agents.

uses
Floor screeds and cement rendering indoors and out, where a high degree of mechanical resistance and flexibility is needed.
Intermediate bond coats between new and old mortars.
Intermediate bond coats for levellers and self-levellers.

instructions for use
Cement rendering and floor screeds
unicem should be added to the mix in a proportion of 5%-10% of the total weight of the cement.

Bond coats
Prepare a liquid slurry of 1 part cement, 1 part unicem and 1 part water and apply to the surface to be treated with a wide brush or roller.

coverage
Consumption (kg/m2) 1,4 *
* per millimetre of thickness.

5l. / 20l.

Acid cement remover. Removes all kinds of cement or plaster remains, saltpetre and efflorescence in general.

acid net

Acid Net is made of specific inorganic acids that make it ideal for removing cement-based remains.

materials
Ceramic and/or stone tiles resistant to acids.

uses
To remove surplus building materials from ceramic wall and floor tiles, both indoors and out.

instructions for use
It is advisable to dilute the product initially. The necessary concentration will depend on how dirty the tiles are. Spread evenly over the surface to be cleaned and leave to act for a few minutes. If necessary, rub off with a non-abrasive pad, rinsing afterwards with water. Repeat this operation until all the remains have been removed.

Before using the cement remover, perform a test to find the right concentration and check its effectiveness and resistance to acids on the surface to be cleaned.
Do not use before the grouting has set.
Consult the manufacturer when used on natural stone.

coverage
Aprox. 90-100 gr/m².

presentation

2l. / 5l.

basic gel

A concentrated alkaline detergent, specially developed for cleaning ceramic tiles in general.

basic gel

Basic gel is made of specific detergents and alkaline agents that make it ideal for removing domestic stains, grease and oil, for removing wax etc.

materials
Ceramic and/or stone tiles resistant to acids.

uses
An alkaline detergent for cleaning domestic stains and dirt from ceramic tiles, both indoors and out.

instructions for use
It is advisable to dilute the product initially. The necessary concentration will depend on how dirty the tiles are.
It can even be applied undiluted. Before it is used, a test should be performed to find the right concentration and check its effectiveness and the resistance of the dirt on the surface to be cleaned.

Spread evenly over the surface to be cleaned and leave to act for a few minutes. Rub with a non-abrasive pad or brush with plastic bristles, rinsing afterwards with water. Repeat this operation, if necessary, until all the remains have been removed.

basic cleaner

introduction

Ceramic tiles are not a finished product in themselves. Customers can only appreciate the design, quality and high performance of ceramic tiles if they have been properly laid, both from a technical and aesthetic standpoint.

Final customer satisfaction is dependent on correct tile laying systems.

Most complaints are due to the improper handling of the tiles and their faulty installation.

Given all the above, a series of preliminary factors need to be taken into account in order to ensure that tiles are properly laid.

For this to be achieved, the ceramic tiles must be laid by a professional of proven experience, with a good working knowledge of the materials to be used.

At the same time, the right tile laying methods must be used in order to ensure a high-quality finish and attractive result.

Thus the tile-laying technique that is recommended by butech and described in this catalogue is the thin-bed method.

This entails spreading an even layer of adhesive (just a few millimetres thick) over the substrate on which ceramic tiles are to be laid.

substrate

In the broad sense of the word, a substrate can be understood to mean the different elements that form the base of the final tiled surface.

The stability and adequate preparation of the substrate are vital in ensuring good results and long-lasting performance.

- The main characteristics of a substrate are its:
- Flatness.
 - Consistency.
 - Water absorption.
 - Surface texture.
 - Chemical compatibility.
 - Performance in the presence of water.
 - Cleanliness.
 - Moisture.

As well as bearing all the above in mind when checking the surface of the substrate, it is also important to take into account structural movements by the base substrate (mainly due to concrete shrinkage). To limit this factor as much as possible, the full curing time for all structural elements should be observed.

However, a good understanding of this and all the other factors that are involved and the right choice of materials for preparing the substrate will make the tile layer's job easier, resulting in a high-quality tiled surface

flatness

Laying tiles using the thin-bed method requires an even, flat substrate. There should be no deviation in flatness of 2 mm or more, measured with a 2m straightedge.

Commonly used cement-based adhesives are usually applied using the thin-bed method.

Do not attempt to compensate for defects in the flatness of the substrate with the adhesive itself. To fix this problem, a cement mortar levelling layer should be applied on both floors and walls.

For floors, self-levelling mortars may also be used, since they ensure surfaces that are ideal for laying ceramic tiles. In this way, the tile layer will work more effectively while also reducing the amount of adhesive that is used

consistency

The adhesive to be used should bond firmly with both the substrate and the tiles. Having said that, it is equally important to ensure a consistent substrate, since the full weight of the tiles will be borne by the latter.

Using a nail or similar object, scrape the surface to check the substrate's level of consistency. Should the substrate crumble easily, with warping, cracking, flaking or similar defects, chip at it until a resistant support is found, before applying a levelling layer of mortar.

For substrates whose surface has a poor consistency, treat them with a consolidating primer to improve their resistance once the tiles have been laid.

water absortion

For them to set and harden, cement-based adhesives require a certain amount of water. If the substrate to which they are applied has a high absorption rate, these adhesives will not have the water they need to set properly, resulting in a low bonding strength and low consistency.

To solve this problem, a pore-sealing primer is recommended to reduce the substrate's absorption rate.

It must also be remembered that a substrate with a low absorption rate implies low porosity, thereby hindering the mechanical bonding action of cement-based adhesives.

In this case, it is necessary to chip at the substrate, apply a bond-enhancing primer or a high-performance cement-based adhesive with chemical bonding action, thereby making up for the lack of mechanical adhesion.

surface texture

The adhesive and the substrate must be chemically compatible in order to ensure good adhesion. For example, cement-based adhesives cannot be directly applied to plaster substrates since their composition is incompatible with plaster.

To solve this problem, primers must be used that avoid direct contact between the adhesive and the plaster. Other types of adhesives that do not contain cement, such as dispersion adhesives, may also be used on these types of substrates.

chemical compatibility

In the event of it being exposed to water (liquid or vapour), it is important for the substrate to remain stable and not to swell, break apart or exhibit any other defect that could adversely affect the final tiled surface.

To overcome this problem, many different types of materials are available for waterproofing substrates, thus avoiding contact with water.
